Fike Corporation

To whom it may concern:

There are no components of the rubber compounds used for Fike Corporation that are derived from animal sources.

The delay came from the status of stearic acid, a common rubber activator. Our supplier has assured us that this food contact grade is pressed from coconut palm oil.

We regret the delay as we researched the answer to your question.

If you have any questions, please, do not hesitate to call or write.

Regards,  
The Flexan Corporation

Daniel Jaster
